Nevada County, California, Implements Aptitude Solutions' OnCore Recording Platform For Greater Efficiency and Access

LPS' OnCore® Solution Effectively Supports High-Volume Property Recordings

JACKSONVILLE, Fla. (June 8, 2009) - Lender Processing Services, Inc. (LPS), a leading provider of integrated technology and services to the mortgage industry and government agencies, today announced that its Aptitude Solutions division has implemented land records recording software in California's Nevada County, providing a powerful software solution that further automates and streamlines land recording and indexing for the county.

OnCore®, Aptitude Solutions' industry-leading recording and indexing platform, enables county governments of all sizes to reduce internal paperwork and easily manage workflow by electronically moving document images through the recording process, rather than through traditional manual and paper-intensive processes. OnCore's features include electronic recording, automatic document queuing, electronic digital stamping, historic image back posting, full accounting functionality and more. The platform's flexibility and wide-ranging capabilities are easily scalable to meet the unique business needs of any size county government.

Nevada County is now the first county in California to implement Aptitude Solutions' OnCore platform for electronic land records indexing and eRecording. "The OnCore platform has proven to be the best system to meet California legislative requirements, including redaction, and to commence eRecording," said Nevada County Clerk-Recorder Gregory J. Diaz. "With this solution, the public now has instant access to search recorded images and information. In addition, our staff can serve the public with greater efficiency through OnCore's immediate scan-first technology."

Now, through OnCore's increased automation and detailed audit checks, Clerk-Recorder Diaz offers immediate up-front scanning with instantaneous searching capabilities for the public to view recorded images and index data. Nevada County plans to take advantage of OnCore's Optical Character Recognition (OCR) technology to automatically index documents as they are

recorded, and Nevada County will also use the same OCR technology to capture redaction elements as documents are recorded. With OnCore's innovative system capabilities, users are able to remain compliant with legislative mandates on privacy by removing sensitive information, such as Social Security numbers, from county recorders' public image libraries.

Paul Miller, president of LPS' Aptitude Solutions said, "We are committed to serving the needs of Clerk-Recorders in the state of California. Nevada County's implementation of the OnCore solution marks the first of many successes in the state."

About LPS Aptitude Solutions

LPS Aptitude Solutions is a division of Lender Processing Services, Inc., a leading provider of integrated mortgage, real estate and government technology and services. LPS Aptitude Solutions is the leading provider of innovative technology solutions for county governments. Our end-to-end suite of software products automates workflow processes and increases efficiency. Software solutions include ShowCase's comprehensive court case management solution, OnCore's land records recording system, Tribute's tax deed filing system, automated indexing and redaction optical character recognition (OCR) tools, Web search engines, and more.
