Pulaski County Arkansas Clerk Live with Aptitude Solutions' OnCore Recording System

Maitland, Florida -- (November 5, 2007) -- Aptitude Solutions, a division of Fortune 500 company Fidelity National Information Services, Inc. (NYSE:FNF) and leading provider of innovative technology solutions for county government, including OnCore county recording and workflow management systems, tax deed filing systems, document management systems and court case management systems, today announced the live implementation in Pulaski County, Arkansas Clerk's office for complete recording software technology and electronic recording.

Pulaski County Arkansas is the 1st County in Arkansas to implement Aptitude Solutions' OnCore recording platform, a system used by county government for electronic land records indexing and eRecording.

Pulaski represents the largest County in the state of Arkansas, with a population of over 350,000, resulting in an increased need to service the public with more speed and efficiency than ever before. After an in depth RFP (Request for Proposals) process, Pulaski County selected Aptitude Solutions to provide the software that would make the County's technology goals attainable. The new system offers the ability to handle high volume recording, including increased automation and detailed audit checks, improving the staff experience and customer service in the recording office and public search arena.

The Pulaski County Clerk Pat O'Brien comments, "Aptitude's OnCore system has effectively allowed us to secure our goals for offering electronic recording, increased automation, and improved customer service through software technology. The installation team at Aptitude Solutions was truly dedicated to our success and made the system transition a seamless and pleasurable process. We look forward to implementing Aptitude's additional software products in the upcoming months."

Pulaski County has also contracted to take advantage of automated redaction and automated indexing OCR (Optical Character Recognition) technologies. aiREDACT and aiINDEX are both seamlessly integrated with the OnCore Recording System. aiREDACT captures redaction candidates as documents are recorded. This solution is designed for the protection of sensitive information within documents, such as redacting social security numbers and personal information from public view. aiINDEX automates the indexing process, thus increasing accuracy and accessibility of the data.

President, Paul Miller comments, "Pulaski County's progressive approach to new technology places them in the arena with the many other forward thinking counties within the Aptitude family who strive to better serve the public through more effective software through-put and efficiencies gained through electronic recording. The dedicated staff at Pulaski County made OnCore's installation a complete success."
